## SQUARE / RECTANGULAR KEBABS

## EABO1/ELBO1 + KAP

The line includes : preparation stations in line and of various lengths according to the quantity of staff filling the moulds. The mould + its lid + the skewer tube assembly are transferred thanks to a roller conveyor and a tilt/ lift device to the loading station of the machines EABO1 and ELBO1.

The productivity depends on the quantity of staff, the organization of the line, the tools and the technical features of the kebabs to be produced.

> This material is in conformity with the following directives and bills: Food contact: EC1935/2004, Good manufacturing practice: EC2023/2006, Machines: EC2006/42, CEM : EC 2004/108

We are also offering roller conveyors with no motor, in this case, the moulds must be pushed by hand or take advantage of the tilt elements.

 EMSENS production lines are easy to clean because of their design which takes into account the constraints of the food industry.  EMSENS productions lines are optimized as regards the ergonomy of the working station in order to reduce the repetitive gestures and movements of the operators.  EMSENS design motorized conveyors including modular belts with the possibility to incline the moulds when filling them or pressing them....
