CUBES RANGE / BACON / STRIPES / STAMPS

# MDL2000

Machine designed to dice bacon stripes out of bacon pieces at a temperature of about  $-12^{\circ}\text{C}$  ( $\pm 5^{\circ}\text{C}$  according to the concentration in salt).

The bacon piece is pressed to get a 260 mm wide block, it is then pushed through a bi-dimensional cutting disk to produce bacon stripes from 4 mm to 11 mm of section according to the tools used.

**Productivity: 2 200 kg/h for bacon pieces of about 4 kg**  
**Loading capacity: 700 x 360 x 120 mm**

**The productivity information is only indicative. A study can be made with your specifications.**

**This material is in conformity with the following directives and bills:**  
Food contact: EC1935/2004,  
Good manufacturing practice: EC2023/2006,  
Machines: EC2006/42, CEM : EC 2004/108

This machine offers a top quality cutting which became THE reference onto the bacon stripes market.

- It includes a hydraulic press which allows to dice bacon pieces with a maximum bending of 120 mm.
- The machine uses the EMSENS patented cutting device with 6 cutting tools by disk.
- The exit of the products is done thanks to a vibrating belt.
- The MDL2000 is a machine designed to dice over 2 200 kg of bacon stripes / hour (calculation based onto a bacon piece of 4.0 kg / unit).
- The distinction between waste and good products is done automatically thanks to a specific belt.
- Working station to optimize the movements and moving of the operators.
- The machine is easy to clean and takes into account the constraints of the food industry.
- A touch screen makes the communication easier between the operator and the machine. The screen includes a self-diagnostic system displaying a picture of the faulty component for example.
