## NETTING MACHINE

# MF03

EMSENS designed a machine to put an elastic net automatically around food products. The cycle of this machine is completely automatic. The net used could be stored on bobbin or in bulk. With the MF03, the operator put manually the product into the machine before starting the automatic cycle. The innovation is that the net is pre-cut according to a defined length and before being put around the product.

**Maximum productivity:  
up to 450 pieces/hour for  
a 800mm product length.**

The caliber of the product defines the machine specificities and cadence.

**The productivity  
information is only  
indicative.**

**A study can be  
made with your  
specifications.**

**This material is in conformity with the following directives and bills:**

Food contact: EC1935/2004,  
Good manufacturing practice: EC2023/2006,  
Machines: EC2006/42, CEM : EC 2004/108

The ergonomics of the loading post optimizes gestures and movements of the operator.

- This machine is totally independent and flexible as the product' size can differ.
- The length net setting is easily made through the screen touch. No need to set the machine mechanically.
- Possibility to use different nets with the same settings.
- Possibility to adapt the material according to the specific needs of the client.
- Easy to clean thanks to the design made according to agri-food requirements (EHEDG member).
