

EMSENS

Today,  
the machine  
of tomorrow.

SQUARE / RECTANGULAR KEBABS

# TPC02

Like the TPC01, the interchangeability of the trays allows an instant and fast change of production without cleaning the machine. The TPC02 has an automatic dispenser for cylindrical wooden skewers.

**Maximum production rate of the machine: 800 cycles/hour.**

One cycle corresponds to the passage of one mold in front of the skewering unit that allows simultaneously the production of 4 to 6 skewers.

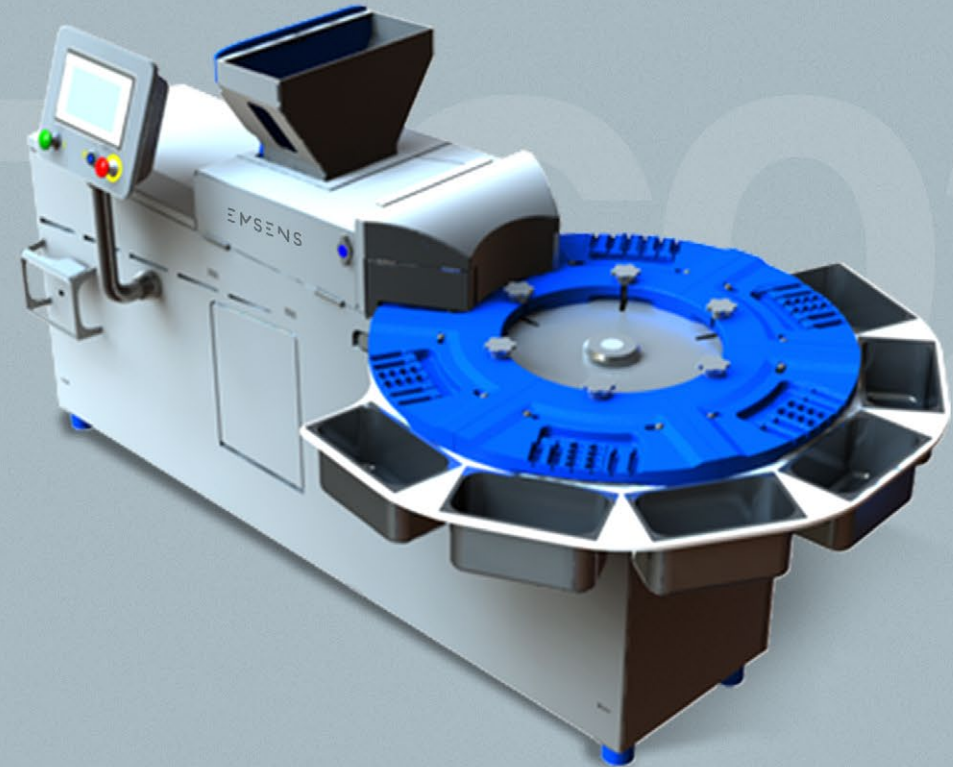

**The quantity of shapes/mold depends on the size and complexity of the skewer to produce.**

**This material is in conformity with the following directives and bills:**

Food contact: EC1935/2004,  
Good manufacturing practice: EC2023/2006,  
Machines: EC2006/42, CEM : EC 2004/108

The skewers made are identical to the handmade kebabs.

- The skewer's handle is not stained by marinades, thanks to an automatic horizontal skewering.
- Easy disassembly and cleaning.

- High speed to change molds without tools which allows to switch from one type of kebab or marinade to another very quickly.
- Large configuration diversity: round skewers Ø3 to Ø5mm, length from 100 to 220mm, automatic selection.

- Ergonomics working station to optimize the movements and moving of the operators.
- Facilité de nettoyage liée à une conception prenant en compte les contraintes agro-alimentaires.
- A touch screen makes the communication easier between the operator and the machine. The touch screen display includes a self-diagnostic system.
