AUTOMATIC-SKEWERING

TPM02

The interchangeability of the trays allows an instant and fast change of production without cleaning the machine. The automatic skewering and selector accept cylindrical wooden sticks up to 240 mm.

Maximum production rate of the machine: 660 cycles/hour.

One cycle corresponds to the passage of one mold in front of the skewering unit that allows simultaneously the production of 4 to 6 kebabs.

Productivity and size information is for information purposes only, any other specifications can be studied.

This material is in conformity with the following directives and bills:

Food contact: EC1935/2004

Good manufacturing practice: EC2023/2006

Machines: EC2006/42 CEM: EC 2004/108

- Manufactured skewers look identical to handmade ones.
- Easy to clean and store the trays.
- Customized production line configuration.
- The handle of the skewers is not soiled by marinades thanks to an automatic horizontal skewering.
- Machine and productivity evolve with the acquisition of additional trays.
