

EMSENS

Today,
the machine
of tomorrow.

SQUARE/RECTANGULAR SKEWERS

ECB01

Fully automatic skewer machine for round skewers, capable of producing square and rectangular skewers.

Skewer selection, mold holding, skewering, meat cutting.

Maximum productivity:
up to 1 000 skewers/hour.

Reduced size
(1 500 x 800 mm).

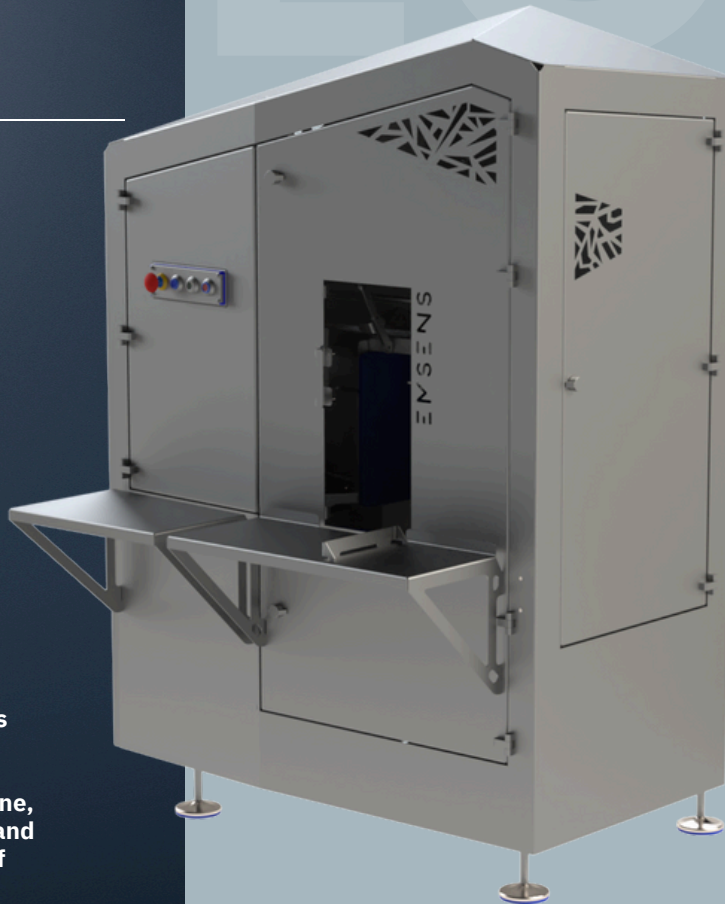

Productivity depends
on the number of
operators, the
organization of the line,
the number of tools and
the characteristics of
the skewer being
produced.

Equipment complies with the following directives and regulations:

Food contact: EC1935/2004,
Good Manufacturing Practice: EC2023/2006,
Machinery: EC2006/42, EMC: EC 2004/108

Multi-format machine.

Production changeover between different skewer sections takes place without human intervention (neither mechanical nor parameter setting).

Tooling is automatically recognized by the machine thanks to RFID technology, enabling instant adaptation of the production cycle.

Compatible with skewers from 14 x 14 mm, with no upper size limit.

- The mold holder ensures smooth insertion, optimizes filling and limits weight variations between skewers.

- Ease of cleaning thanks to a design that takes into account food industry constraints and EHEDG recommendations.

- Ergonomic workstation, optimizing operator movements.

- Screen mirroring technology offers an intuitive interface and simplified troubleshooting assistance for efficient man/machine communication.
